PRODUCT SPECIFICATION FOR APPROVAL

Product Description	:	MULTILAYER VARISTOR , CHIP TYPE
Product Part Number	:	E Z J Z 1 V 3 9 0 1 0

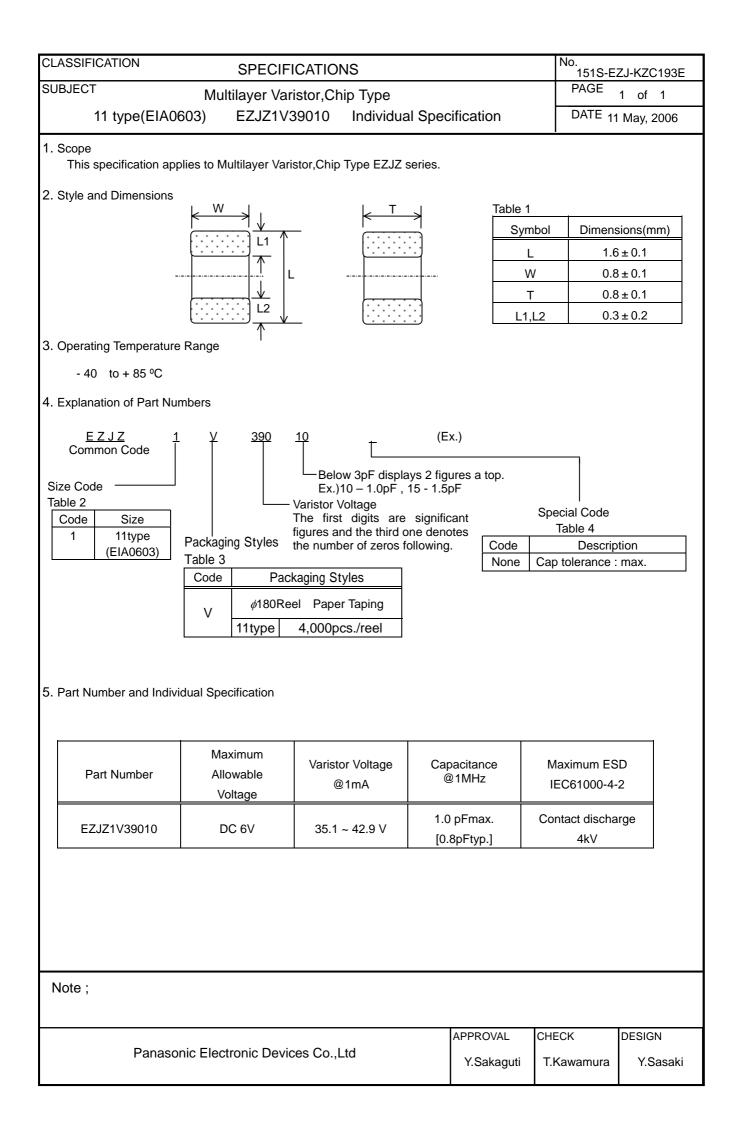

Customers Part Number	:	
Country of Origin	:	Japan
Applications	:	Consumer Type Electric Equipment

.....

If you approve this specification, please fill in and sign the below and retur	n 1copy to us.

CLASSIFICATION	SPECIFICATIONS	No. 151S-EZJ-KZG195E
SUBJECT	Multilayer Varistor , Chip Type	PAGE 1 of 5
	Common Specification(EZJZ Series)	DATE 11 May, 2006
1. Information		

1-1.Applicable laws and regulations

(1) Any ozone-depleting substances listed in the Montreal Protocol are not used in the manufacturing processes for parts and materials used in this product.

- (2) PBB and PBDE are intentionally excluded from materials used in this product.
- (3) All the materials used in this product are registered materials under the Law Concerning Examination and Regulation of Manufacture and Handling of Chemical Substances.
- (4) This product complies with the RoHS, DIRECTIVE 2002/95/EC on the Restriction of the use of certain Hazardous Substances in electrical and electronic equipment.
- (5) This product is exported with export procedures under export related laws and regulations such as the Foreign Exchange and Foreign Trade Law.

1-2.Limitation in Applications

This product was designed and manufactured for general-purpose electronic equipment such as household, office, information & communication equipment. When the following applications, which are required higher reliability and safety because the trouble or malfunction of this product may threaten the lives and/or properties, are examined, separate specifications suitable for the application should be exchanged.

· Aerospace / Aircraft equipment, Warning / Antitheft equipment, Medical equipment, Transport equipment (Motor vehicles, Trains, Ship and Vessel), Highly public information processing equipment, Others equivalent to the above.

1-3. Production factory

- (1) Panasonic Electronic Devices Hokkaido Co., Ltd.
- (2) Tianjin Matsushita Electronic Components Co., Ltd.(TMCOM)

2. Scope

2-1. This specification applies common specification to multilayer varistor/chip type . If there is a difference between this common specification and any individual specifications, priority shall be given to the individual specifications.

2-2. This product shall be used for general-purpose electronic equipment such as audiovisual, household, office, information & communication equipment.

Unreasonable applications may accelerate performance deterioration or short/open circuits as failure modes affecting the life end. Adequate safety shall be ensured especially for product design required a high level of safety with the following considerations. 1) Previously examine how a single trouble in this product affects the end product.

2) Design a protection circuit as Failsafe-design to avoid unsafe system resulting from a single trouble with this product.

2-3. Whenever a doubt about safety arises from this product, immediately inform us for technical consultation without fail, please.

CLASSIFICATION SPECIFICATIONS No. 151S-EZJ-SC					ZJ-SCS001E			
SUBJEC	T	Multilayer Varistor , Chip Type		PAGE	1 of 9			
	Commo	n Specification (Precautions for Us	e)	DATE	5 May, 2004			
	 Precautions for Use The Multilayer Varistors (hereafter referred to as "Varistors") may fail in a short circuit mode in an open-circuit mode when subjected to severe conditions of electrical, environmental and/or mechanical stress beyond the specified "Rating and specified "Conditions" in the Specifications, resulting in burn out, flaming or glowing in the worst case. The following "Operating Conditions and Circuit Design" and "Precautions for Assembly" shall be taken in your major consideration. If you have a question about the "Precautions for Use", please contact our engineering section or factory. 							
 2. Operating Conditions and Circuit Design 2- 1.Circuit Design 2-1-1. Fail mode The Multilayer Varistors (hereafter referred to as "Varistors") may fail in a short circuit mode in an open-circuit mode when subjected to severe conditions of electrical, environmental and/or mechanical stress beyond the specified "Rating and specified "Conditions" in the Specifications, resulting in burn out, flaming or glowing in the worst case. If it is used especially in the short state, there is a afraid that a circuit board may be damaged by fire by generation of heat by short current. Please examine a protection means to intercept short current. 								
2-1-2.	temperature rating.	re Range rating Temperature Range" in the Speci n of the Varistors shall be operated within the						
2-1-3.	2-1-3. Design of Voltage application The Varistors shall not be operated exceeding the specified "Maximum Allowable Voltage" in the Specification. If voltage ratings are exceeded, the Varistors could result in failure or damage. If high frequency voltage or fast rising pulse voltage is applied continuously even within the "Rated Voltage", contact our engineering section before use. Such continuous application affects the life of the Varistors.							
2-1-4.	2-1-4. Design of Current application When a varistor is in a short state in the secondary circuit of a power supply circuit etc., large current flows and generates heat and there is a danger that a circuit board will be damaged by fire. Please fully examine safety, such as preparing a protection circuit.							
2-1-5.	2-1-5. Temperature Rise The surface temperature of a varistor should become below the highest use temperature range specified on specifications also including a part for the temperature rise by self-generation of heat. In addition, please check the temperature rise by the use circuit conditions of a varistor in the state of operation of actual use apparatus.							
2-1-6.	 2-1-6. Restriction on Environmental Conditions The Varistors shall not be operated and / or stored under the following environmental conditions. (1) Environmental conditions (a) To be exposed directly to water or salt water (b) To be dew formation (c) Under conditions of corrosive gases such as hydrogen sulfide, sulfurous acid, chlorine and ammonia (2) Under severe conditions of vibration or impact beyond the specified conditions in the Specifications

(2) The size of lands shall be designed to be equal between the right and left sides. If the amount of solder on the right land is different from that on the left land, the component may be cracked by stress to one side of the component since the side with a larger amount of solder solidifies later at the time of cooling.

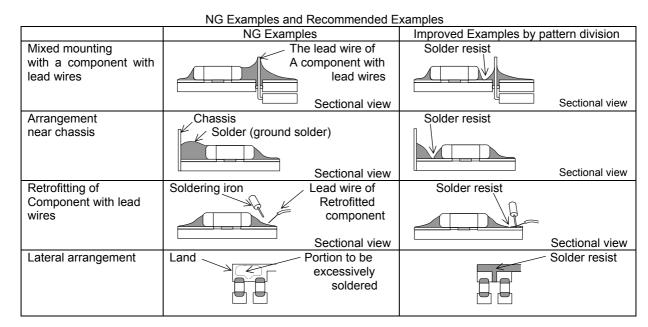

CLASSIFICATION	SPECIFICATIONS	No. 151S-EZJ-SCS001E
SUBJECT	Multilayer Varistor , Chip Type	PAGE 3 of 9
	Common Specification (Precautions for Use)	DATE 25 May, 2004

2-2-3. Applications of Solder Resist

Applications of Solder resist are effective to prevent solder bridges and to control amounts of solder on PC boards.

(1) Solder resist shall be utilized to equalize the amounts of solder on both sides.

(2) If the Varistors are arranged in succession, solder resist shall be used to divide the pattern in the mixed mounting with a component with lead wires or in the arrangement near a chassis etc. See the table below.

2-2-4. Component Layout

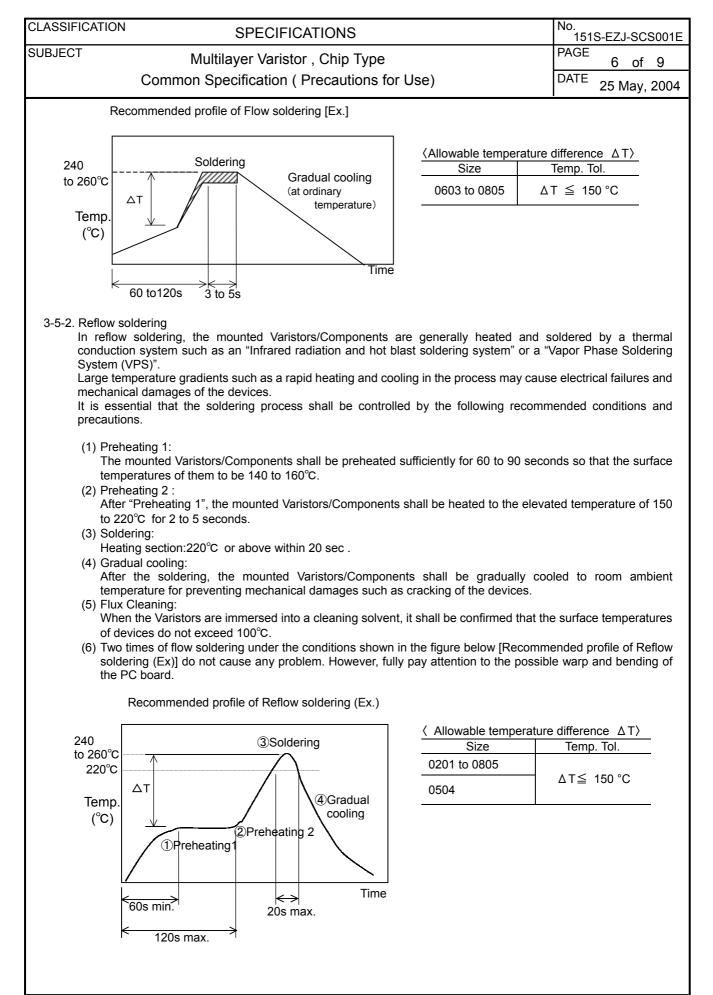

The Varistors / components shall be placed on the PC board so as to have both electrodes subjected to uniform stresses, or to position the component electrodes at right angles to the grid glove or bending line to avoid cracking in the Capacitors caused by the bending of the PC board after or during placing / mounting the Varistors / components on the PC board.

(1) The recommended layout of the Varistor to minimize mechanical stress caused by warp or bending of a PC board is as below.

	NG Example	Recommended Example
Warp of Circuit board		Lay out the Varistor sideways against the stressing direction

CLASSIFICATION	SPECIFICATIONS	No. 151S-EZJ-SCS001E					
SUBJECT	Multilayer Varistor , Chip Type	PAGE 8 of 9					
	Common Specification (Precautions for Use)	DATE 25 May, 2004					
 (2) If cleaning is excessive : (a) Too much output of ultrasonic cleaning may deteriorate the strength of the terminal electrodes or cause 							

cracking in the solder and/or ceramic bodies of the Varistors due to vibrated PC boards.

The following conditions are for Ultrasonic cleaning.

Ultrasonic wave output: 20 W/L max.

Ultrasonic wave frequency: 40 kHz max.

Ultrasonic wave cleaning time: 5 min. max.

3-6-3. Cleaning with contaminated cleaning solvent may cause the same results in case of insufficient cleaning due to the high density of liberated halogen.

3-7.Process Inspection

When the mounted PC boards are inspected with measuring terminal pins, abnormal and excess mechanical stresses shall not be applied to the PC board and mounted components, to prevent failures or damages of the devices.

- (1) The mounted PC boards shall be supported by some adequate supporting pins setting their bending to 90 mm span 0.5mm max.
- (2) It shall be confirmed that measuring pins have a right tip shape, are equal in height and are set in the right positions.

The following figures are for your reference to avoid the possible bending of PC board.

	NG Example	Recommended Example		
Bending of PC board	Check pin Separated	Check pin Supporting pin		

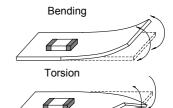

3-8.Protective Coat

When the surface of a PC board on which the Varistors have been mounted is coated with resin to protect against moisture and dust, it shall be confirmed that the protective coat does not have influences on the reliability of the Varistors in the actual equipment.

- (1) Coating materials, such as being corrosive and chemically active, shall not be applied to the Varistors and other components.
- (2) Coating materials with large thermal expansivity shall not be applied to the Varistors for preventing failures or damages (such as cracking) of the devices in the curing process.

3-9.Dividing/Breaking of PC Boards

- (1) Abnormal and excessive mechanical stresses such as bending or torsion as below, which cause cracking in the Varistors, on the components on the PC board shall be kept minimum in the dividing/breaking.
- (2) Dividing/Breaking of the PC boards shall be done carefully at moderate speed by using a jig or apparatus to prevent the Varistors on the boards from mechanical damages.

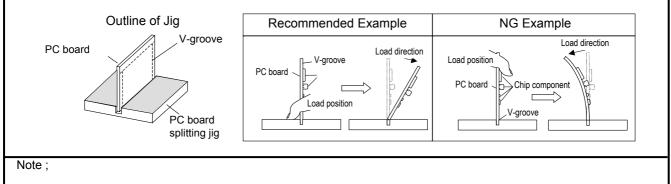

(3) Examples of PCB dividing/breaking jig

The outline of PC board breaking jig is shown below.

As a recommended example, Dividing/Breaking of the PC boards shall be done by holding the position near the jig where is free from bending, and so as to be compressive stress for the components such as the Varistors on the PC board.

And as a NG example, if holding the PC board at any position apart from the jig, tensile stress to the Varistor may cause cracking in the Varistors.

LASSIFICATION SPECIFICATIONS	No. 151S-EZJ-SCS001E
UBJECT Multilayer Varistor , Chip Type	PAGE 9 of 9
Common Specification (Precautions for Use)	DATE 25 May, 2004
 3- 10.Mechanical Impact (1) The Varistors shall be free from any excessive mechanical impact. The Varistor body, which is made of ceramics, may be damaged or cracked by dropping impact. Never use dropped varistors because their quality may be already impaired and its failure level of significance may be increased. Particularly, large size varistors tend to be damaged or cracked more easily. (2) When handling the PC boards on which the Capacitors are mounted, the Varistors shall not collide with another PC board. When mounted PC boards are handled or stored in a stacked state, impact caused by colliding between the corner of the PC board and the Varistor may cause damage or cracking in the Varistor. 	Floor Crack Mounted PCB
. Other Various precautions described above are typical ones. For special mounting conditions, please contact us.

3) Packaging	: We shall pac	k suitably in order Carrier-Ta			ransportation c	or storaç	je.	
3) Packaging3- 2.Packing Quantity	Thickness of	Carrier-Ta	pe	Quan		or stora <u>c</u>	je.	
3) Packaging				Quan	tity (pcs./reel)		ie.	
3) Packaging 3- 2.Packing Quantity	Thickness of	Carrier-Ta	pe Taping	Quan ∳1t Packaging	tity (pcs./reel) 30mm Reel	tity	ie.	
3) Packaging 3- 2.Packing Quantity Type	Thickness of Capacitor(mm)	Carrier-Ta Material	pe Taping Pitch	Quan ∳1t Packaging Code	tity (pcs./reel) 30mm Reel Quan	tity D	je.	
3) Packaging 3- 2.Packing Quantity Type 06type (0201)	Thickness of Capacitor(mm) 0.30 +/- 0.03	Carrier-Ta Material Paper Taping	pe Taping Pitch 2mm	Quan ∳1t Packaging Code V	tity (pcs./reel) 30mm Reel Quan 15000	tity D	je.	
3) Packaging 3- 2.Packing Quantity Type 06type (0201) 10type (0402)	Thickness of Capacitor(mm) 0.30 +/- 0.03 0.50 +/- 0.05	Carrier-Ta Material Paper Taping Paper Taping	pe Taping Pitch 2mm 2mm	Quan ø1t Packaging Code V V V	tity (pcs./reel) 30mm Reel Quan 15000 10000	tity D	ie.	
3) Packaging 3- 2.Packing Quantity Type 06type (0201) 10type (0402)	Thickness of Capacitor(mm) 0.30 +/- 0.03 0.50 +/- 0.05 0.8 +/- 0.1	Carrier-Ta Material Paper Taping Paper Taping Paper Taping	pe Taping Pitch 2mm 2mm 4mm	Quan ∳18 Packaging Code V V V V	tity (pcs./reel) 30mm Reel Quan 15000 10000 4000	tity))	ie.	

Explanation of Part Numbers (Example)

3- 3.Marking on the Reel
The following items are described in the side of a reel in English at least.
1) Part Number
2) Quantity

- a) Lot Number
 4) Place of origin

Note ;	01 Apr, 2005	Change the company name. Previous : Matsushita Electronic Components Co., Ltd. New : Panasonic Electronic Devices Co., Ltd.						
			APPROVAL	CHECK	DESIGN			
Panasonic Electronic Devices Co., Ltd.		Y.Sakaguti	S.Endoh	Y.Sasaki
