

## Access Point Configuration

**Access Point in Router Mode** (See Figure 1)  
(Connected wireless devices are set up on their own network)

Discovery OEM Device Name =	(Users option)
Radio Startup Mode =	On
WLAN Connection Type =	Access Point
SSID =	(Users option)
WLAN Security Type =	(Users option)
Ethernet Role =	Router
WLAN Channel: =	(Users option)
Wireless DHCP Server Enabled =	Enable
WLAN DHCP: (Client) =	(Not used)
Ethernet DHCP (for networks with DHCP servers) =	Enabled
WLAN Static IP address =	192.168.10.100 (Denotes first IP address assigned by WLAN DHCP server.)
WLAN Subnet Mask =	255.255.255.0
WLAN Gateway Address =	192.168.10.1

**Access Point in Bridge Mode** (See Figure 2)  
(Connected wireless devices are connected to corporate network)

Discovery OEM Device Name =	(Users option)
Radio Startup Mode =	On
WLAN Connection Type =	Access Point
SSID =	(Users option)
WLAN Security Type =	(Users option)
Ethernet Role =	Bridge
WLAN Channel: =	(Users option)
Wireless DHCP Server Enabled =	(Not used)
WLAN DHCP: (Client) =	(Not used)
Ethernet DHCP (for networks with DHCP servers) =	(Users option)
WLAN Static IP address =	192.168.10.100 (Not used in Bridge Mode)
WLAN Subnet Mask =	255.255.255.0 (Not used in Bridge Mode)
WLAN Gateway Address =	192.168.10.1 (Not used in Bridge Mode)

## QUICK START GUIDE

@QUATECH

### APXG-Q5420

Wireless Access Point

## ✓ First Things First...

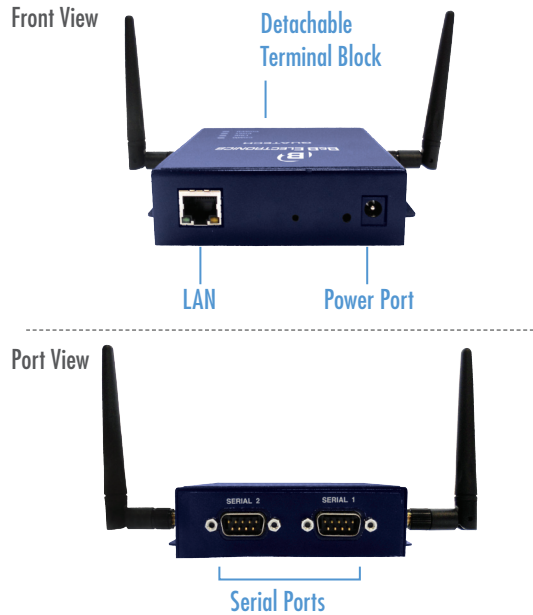

Before you begin, be sure you have the following:

- Wireless Access Point
- CD with Airborne Management Center software and user manual
- (2) Antennas

Fast and easy on the web: [www.bb-elec.com](http://www.bb-elec.com)

# Product Overview

## 1 Setup

1. Place the AirborneAP™ CD in the CD/DVD drive of the laptop or desktop you will be using to configure the AirborneAP™ device. Follow the on-screen directions for installation.
2. Use a piece of Cat5 cable to connect the Ethernet port on the APXG to a network that supports DHCP, or directly to the Ethernet port on your laptop or desktop.

Note: When connected directly to a computer Ethernet port, disable all other installed Ethernet adapters, wireless or wired, during the configuration process.

## 2 Power the APXG-Q5420

Apply power to the APXG-Q5420. The unit will boot and display the following LED pattern:

COMM:	Red
LINK:	Off
POST:	Orange
POWER:	Blue

## 3 Connect to the Device

1. Run the Airborne Management Center (AMC) application. This was installed during the CD installation and a menu item will be found in the Airborne folder located in the programs directory of your system. The application will display the following dialog:

Select Group Name: "manuf" and enter Group Password: "dpac"

2. The Airborne Management Center will load and discover the attached device.

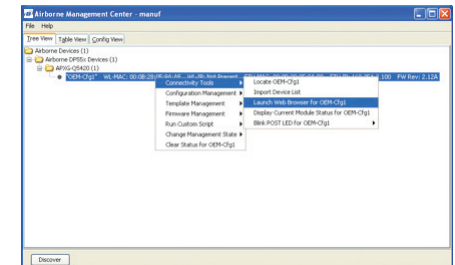

Note: You may be required to wait up to 180 seconds before the APXG is discovered and displayed. This is due to the use of the AutoIP fallback function when connected directly to the APXG.

## 4 Manage Your Device

Right click the device's name. Under "Connectivity Tools" choose "launch Web browser for OEM-Cfg1." This will open the device's browser-based management window.

Username = "dpac"  
Password = "dpac"

## 4 Manage Your Device, cont.

If this is not the first time you have accessed the web interface it will default to the Module Status page. If it is the first time, the web browser will default to the Express Setup page. To access the Express Setup page, select the Configuration tab at the top of the page (dark blue bar) and then select the Express Setup link in the left hand column (light blue column). You are now ready to configure your device.

Note: None of your changes will take effect until you click the "Commit" button at the bottom of the page and then reboot the device.

## 5 Check Your Setup

If your device is connected and configured correctly, you will see the following LED Status:

COMM: Red  
 LINK: Green  
 POST: Green  
 POWER: Blue

Settings for Router Mode and Bridge Mode configurations are listed on the other side of this document.
