With an AXS-COM audio entry system you know who's there before you open the door.
Storm AXS-COM

Storm AXS-COM

STORM AXS-COM Intercom for Access Control.

STORM AXS-COM Intercom for Access Control is a secure, self contained, two way voice communication system. From a secure location a receptionist can talk to visitors awaiting access through a locked door. This allows the caller's identity and nature of business to be checked before allowing entry to a secure area.

The receptionist can unlock the door by pressing a remote lock-release switch incorporated in the receptionist's handset. **AXS-COM** is a "stand-alone" system; alternatively it can be used in conjunction with **STORM AXS Access Control Keypads.**

AXS-COM is available in two versions. One providing communication between a caller and a single internal station (receptionist); the other providing communication between a caller and up to four internal stations (e.g. Reception, Goods-in, Trade Desk, Security, etc.). Each **AXS-COM** is supplied complete with one receptionist's handset. Additional handsets are available from your chosen **AXS-COM** supplier.

The **AXS-COM** is a versatile device for use with suitable d.c. or a.c. powered systems. It is compatible with most electrically operated releases and locks.
